

What are the four parts of a spectrometer

Overview

The workings of a spectrometer can be broken down into four main parts: the light source, the collimator, the monochromator, and the detector. An optical spectrometer (spectrophotometer, spectrograph or spectroscope) is an instrument. Listed below are some of the key components that make measuring transmittance possible.

What are the four parts of a spectrometer

Spectrometers

Process spectrometers practically always have to achieve higher sampling rates. With laboratory devices, one measurement per second is often sufficient,
