

# **What are the protective devices in the distribution box**

## Overview

---

Most distribution boxes contain circuit breakers or fuses that function as protective barriers for the connected wiring and electrical devices. Ultimately, protection is not optional—it's a critical backbone of any electrical distribution network. Surge protectors (Surge Protective Devices, SPD) installed in distribution board panels are primarily used to protect electrical equipment from transient voltages (surges or spikes) caused by lightning strikes, power grid fluctuations, or other factors. Distribution boxes, or electrical junction boxes as they are sometimes called, play a vital role in electrical systems.

## What are the protective devices in the distribution box

---

### What is an Electrical Distribution Box? A

These boxes often include additional protection components like surge protection devices (SPDs) and may be paired with transformer boxes to
