

What does the green color of the small fiber optic tray represent

All-Optical Backplane

- Zero fiber connections at the optical layer, three layers of dustproof design, and stable running for 20 years
- Innovative multi-level dustproof and optical port alignment technologies, ensuring high reliability

Many-Degree WSS

- 32 degrees, non-blocking flexible grooming
- Contentionless, OA-free, high reliability, 3x wavelength dropping efficiency compared with traditional boards

Digital Optical Layer

- Use of OFDM pilot tone and high-precision wavelength monitoring technologies to visualize the fiber quality, wavelength resources, and performance of the OXC system, achieving digital O&M

Overview

Note: Boot colors may differ slightly by manufacturer, but blue = UPC and green = APC is universal. The TIA-598-D standard defines a standardized color-coding system that engineers and technicians rely on to identify different types of fiber optic cables, connectors, and individual. Why are some fiber optic connectors green and others blue?

Among the most commonly used colors for fiber optic connectors are green and blue. Its bright lime green jacket stands out and signals support for multiple wavelengths on a single fiber, making it great for 100+ Gb/s transmission. OS1 is used for indoor, tight-buffered cabling, while OS2 is used outdoors or in.
