

What is a switch aggregation device

Overview

An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. An Aggregation or "Top-of-Rack" switch is designed to connect everything in a rack at high speeds, then have an even bigger pipe out to the rest of the network.

What is a switch aggregation device

Aggregation Router

An 'Aggregation Router' is a device located in the services aggregation layer of a data center LAN that integrates important network services such as firewalls and server load balancers, allowing them to
