

# **What material are Cambodian cable trays made of**

## Overview

---

Manufactured from a choice of materials including galvanised steel, 304 stainless steel, hot-dip galvanised steel, and powder-coated steel, these cable trays are engineered for durability in Cambodia's tropical climate — where heat, humidity, and corrosion pose real threats to. Our cable trays are long-lasting, resistant to corrosion, and suitable for use in any climate because they are made from high-quality aluminum and stainless steel in Cambodia. The wire mesh cable tray manufactured by Cat Van Loi is certified in accordance with NEMA BI 50015 standards. Steel is one of the most popular materials for cable trays, and it's not hard to see why. These trays may be made of wire mesh, called "cable basket", or be designed in the form of a single central spine (rail) with ribs to support the cable on either side.
