

What types of GPON optical modules are there

Overview

OLT (Optical Line Terminal), Chinese name is Optical Line Terminal (OLT), mainly installed with the central control station, the transmission rate is TX 2. A GPON optical module is a transceiver used in GPON networks to convert electrical signals into optical signals and vice versa. GPON replaces the traditional three-tier Ethernet design with a two-tier optic network which eliminates access and distribution Ethernet switches with passive optical devices. GPON SFP modules act more like a highway system, with dedicated lanes for the different vehicle types.

What types of GPON optical modules are there

What is ONU (Optical Network Unit)?

Discover what an ONU is, its features, benefits, and types. Learn how it enhances fiber-optic networks and how to choose the right ONU for your needs.
