

# Where is a single-port optical module used

## Overview

---

A single mode SFP transceiver is a hot-swappable optical module designed to transmit and receive data over single mode fiber (SMF). It is commonly used in Ethernet and fiber optic networking equipment such as switches, routers, and media converters. Often referred to as a "mini GBIC" (Gigabit Interface Converter), it replaces larger GBIC modules with a smaller. The sfp transceiver single mode typically utilizes laser diodes as the light source and operate at wavelengths of 1310nm or 1550nm.
