

# Which brand of fiber optic coupler is better

## Overview

---

A fiber optic connector is a mechanical device used to align and join optical fibers, enabling light to pass through with minimal loss. They are used to connect fiber optic cables to transmit data over long distances, and they come in different types such as SC, LC, ST, and FC connectors. It provides an objective comparison to help you identify the best solutions for your networking needs. If you choose poorly, the server signal will not be strong, there will be delays in. In real-world networks, couplers let one signal reach many users, allow several signals to share one fiber path, or sample a small amount of light for monitoring.
