

Which cable tray type is most corrosion resistant

Overview

Stainless Steel: Highly resistant to corrosion, ideal for harsh environments. Aluminum's exceptional corrosion resistance, particularly its resistance to atmospheric agents, is due to a thin, continuous natural oxide film (alumina) that protects its aluminum alloys (Aluminum Association). Mild corrosion environments, such as typical urban areas or office buildings, often expose cable trays to minimal corrosive elements. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl. GRP Cable Trays and Cable Ladders are products that set the industry standard for cable support systems worldwide. Corrosion-resistant cable trays are essential components in modern electrical infrastructure, especially in environments prone to moisture, chemicals, or extreme temperatures.

Which cable tray type is most corrosion resistant

Cable Tray: Material Properties

Ventilated cable tray systems are commonly fabricated from a corrosion-resistant metal or from a metal with a corrosion-resistant finish. The selection of the proper
