

Which port on the fiber optic leased line should be connected to the router

Overview

Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled "ONT" or "Fiber"). It's going to be wires only and the ISP has said they'll terminate on a BT Openreach Adva NTE - presenting an LC SFP module. Since the handover from the service provider is a FE port, you should look at an ether-channel, preferably using LACP. They are responsible for establishing and managing the leased line connections, ensuring secure data transfer between Branch A and Branch B.

Which port on the fiber optic leased line should be connected to the

How to Connect Fiber Optic Cable to Router: Top 5

Connect the fiber optic cable from your ISP to the media converter's optical port. Connect an Ethernet cable from the media converter's Ethernet port
